Economic Prospects for CESEE

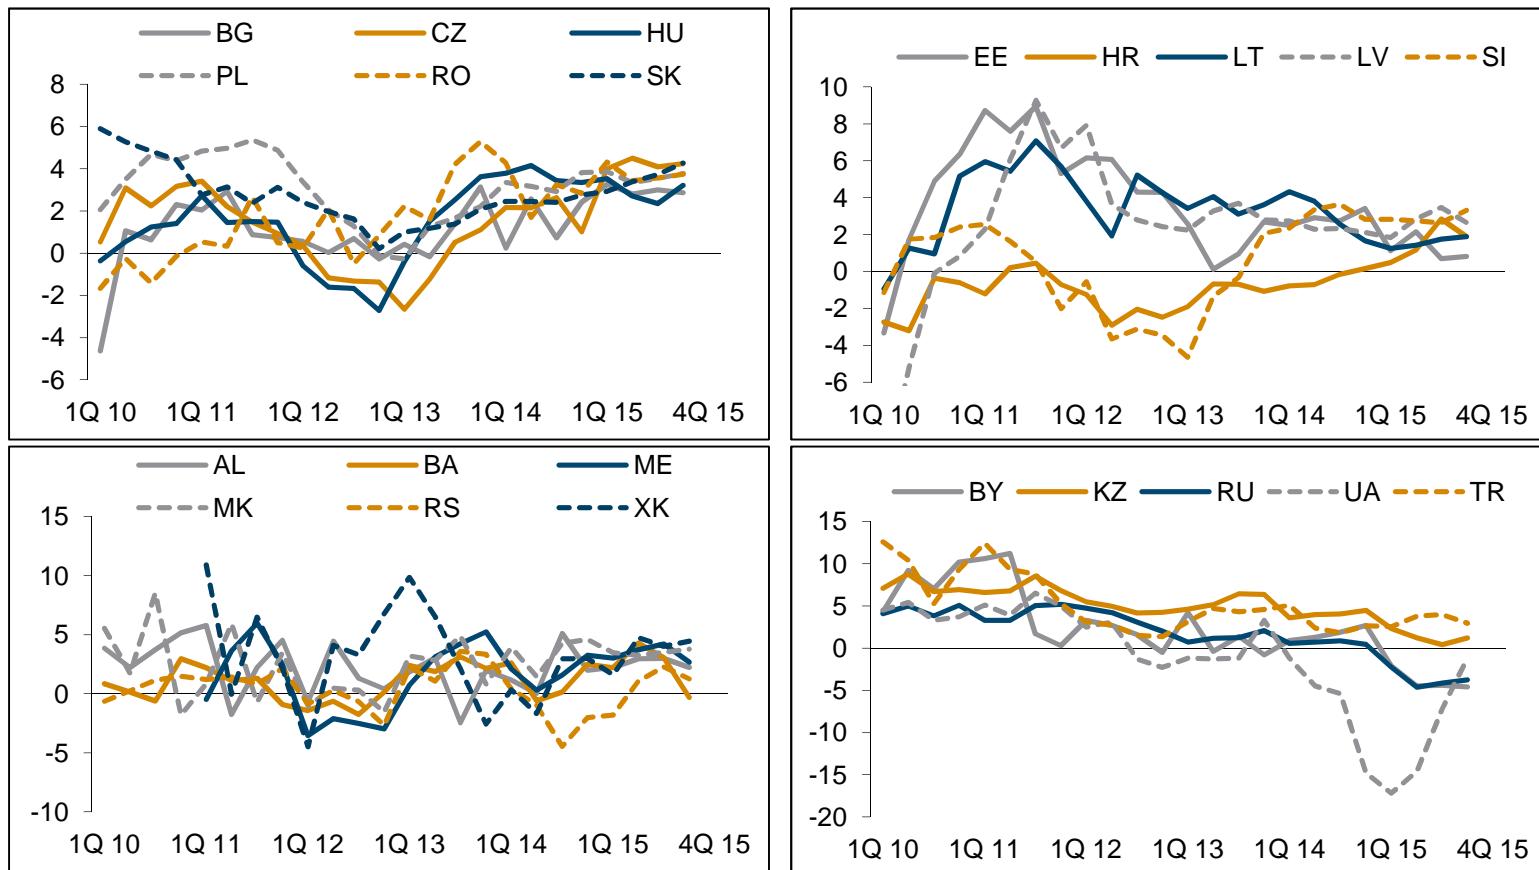

Gábor Hunya

Main questions after a year of consumption revival/decline:

- Will investments contribute more to future growth?
 - Can Russia and UA overcome the depression?
-
- 2015 GDP growth
 - higher than expected in the EU-CEE and WB – reached peak
 - lower in the CIS-3 and UA – bottoming out in late 2016
 - Future growth factors for EU-CEE and WB based on stability achieved:
 - household consumption the main driver – real wages rise (low inflation)
 - emigration leads to labour shortages and pressure on wages
 - reviving investments, both public and private – EU transfers cyclical
 - more fiscal space following rebalancing, except in HR, HU, RS, SI
 - current account balance will deteriorate within narrow margins
 - risks stemming from global and EU growth slowdown (assumptions: EC Winter Forecast)
 - CIS and UA depressed by low oil prices, depreciation, inflation, rebalancing needs, conflicts and embargoes – future depends on oil prices and reforms

Divergence of economic growth: EU-CEE, WB and Turkey rise, CIS-3 and Ukraine fall

Quarterly real GDP growth of the CESEE countries, change in % against preceding year

Main growth drivers: household consumption and investment

GDP growth in 2015-2018 and contribution of individual demand components in the EU-CEE, in percentage points

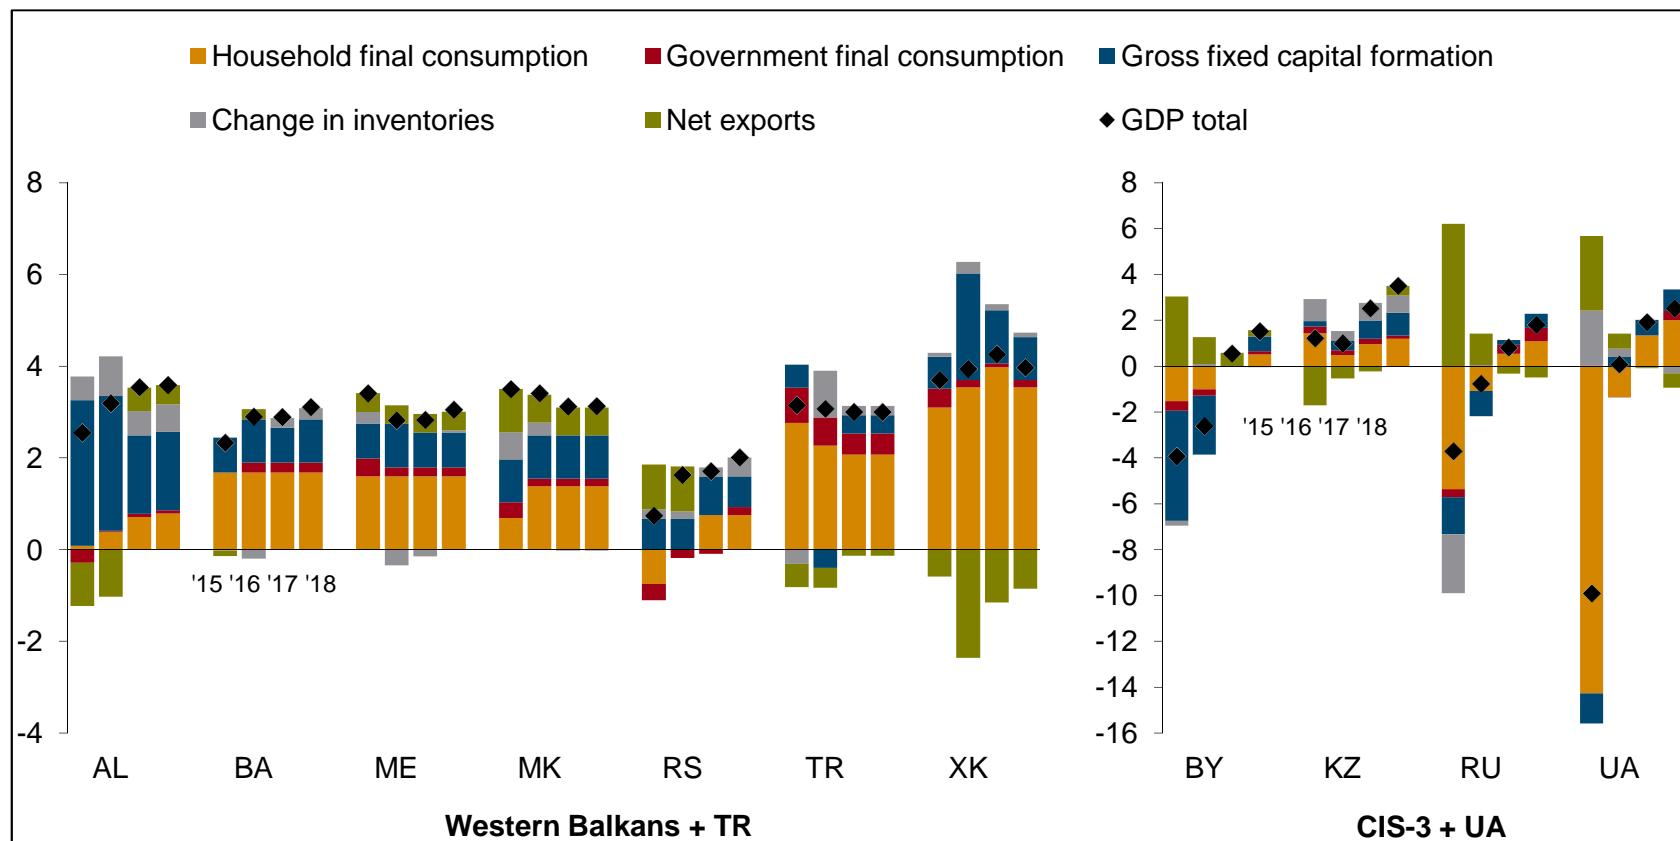

Source: wiiw Annual Database incorporating national and Eurostat statistics; own calculations.

Forecasts by wiiw.

Western Balkans similar to EU-CEE; austerity in CIS+UA

GDP growth in 2015-2018 and contribution of individual demand components in the WB, Turkey, CIS-3 and Ukraine, in percentage points

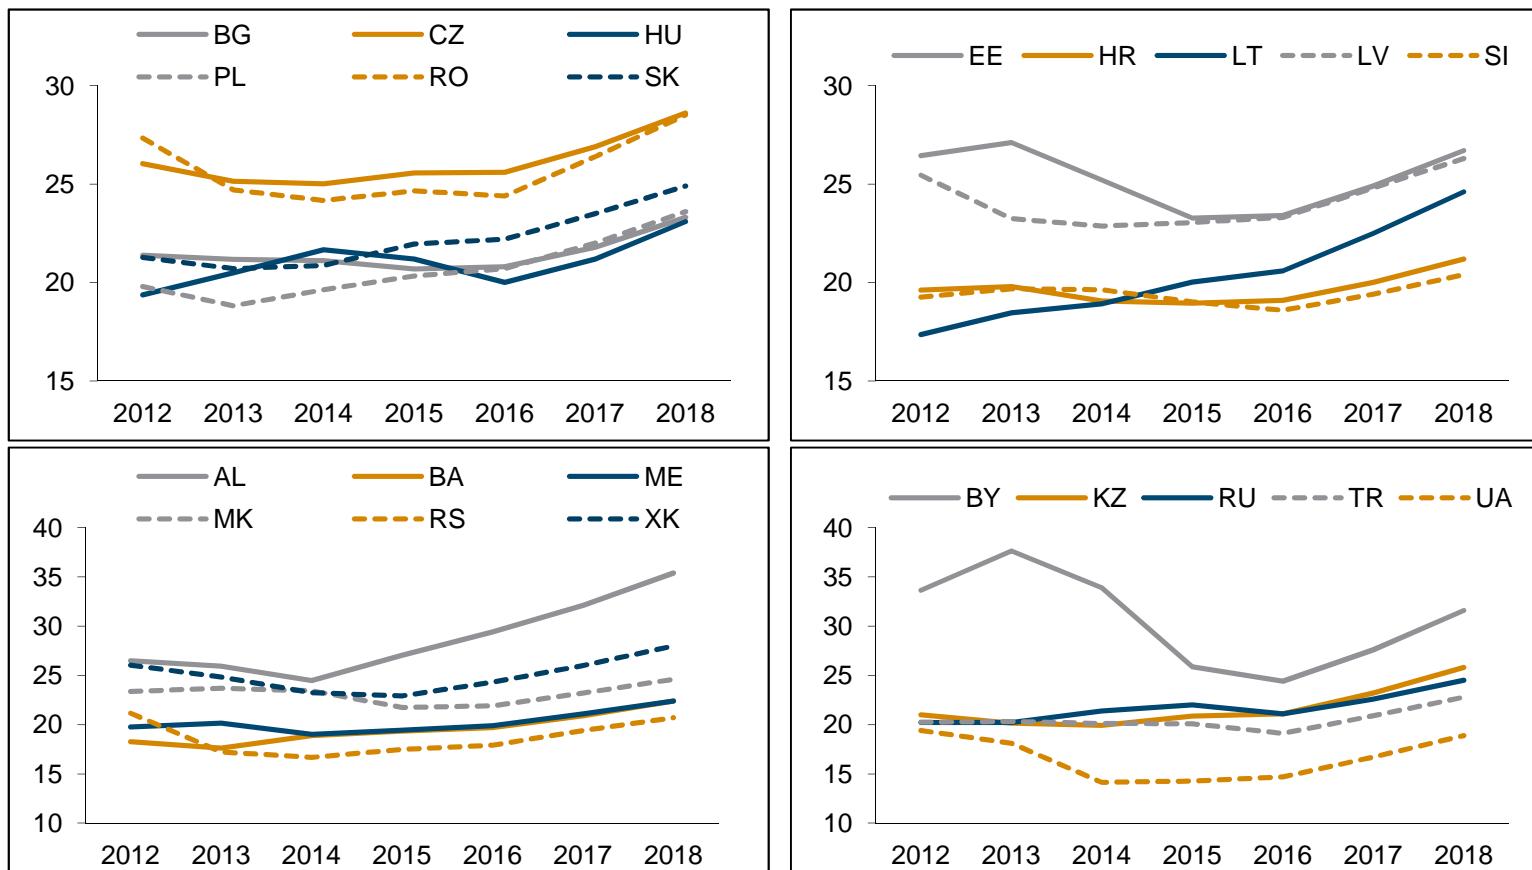

Source: wiiw Annual Database incorporating national and Eurostat statistics; own calculations.

Forecasts by wiiw.

Investment revival after temporary decline

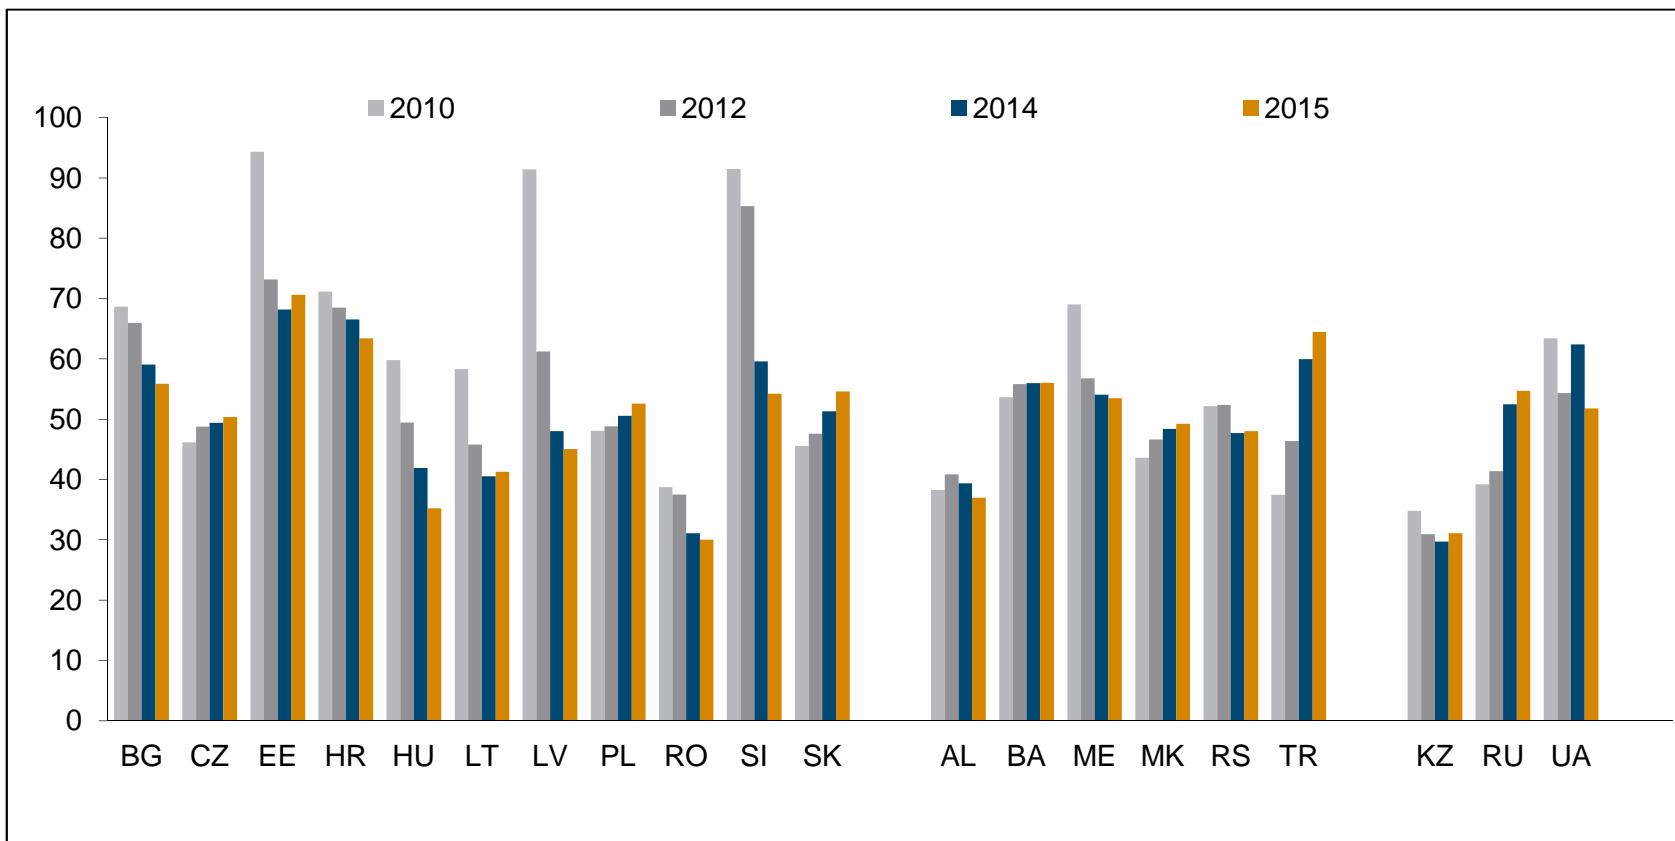

Gross fixed capital formation in % of GDP

Source: wiiw Annual Database incorporating national and Eurostat statistics; wiiw forecasts.

Conditions for private investment start improving: bank loans from deleveraging to recovery; less non-performing loans; slightly more greenfield FDI; higher profits

Stock of private bank loans, % GDP, 2010-2015

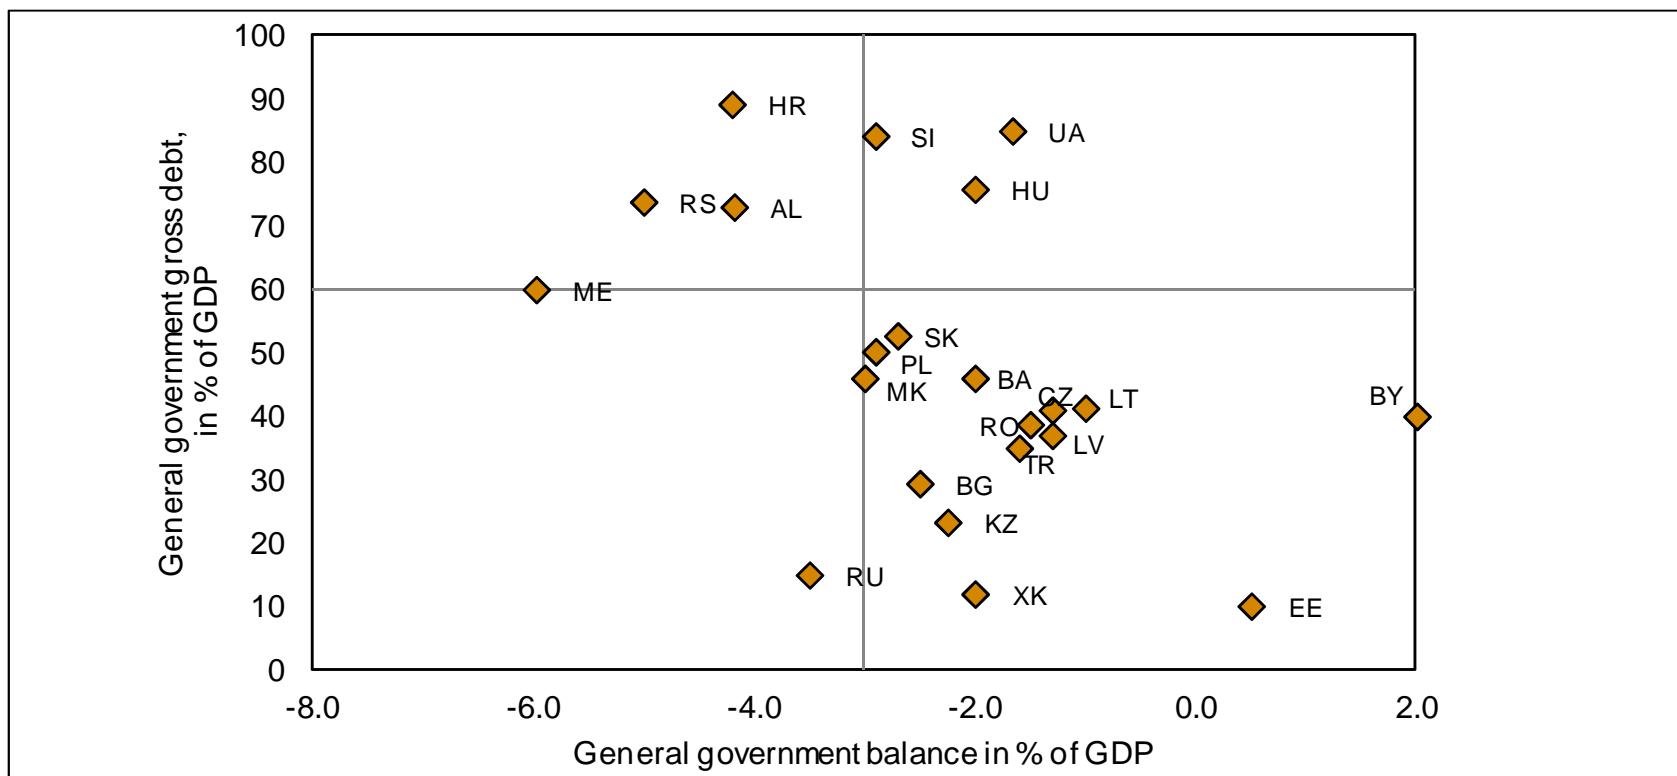

Note: Private bank loans comprise loans of non-financial corporations and households taken from banking statistics.

Source: National Bank statistics, wiiw own calculations.

Conditions for public investment: fiscal space dependent on debt level ...

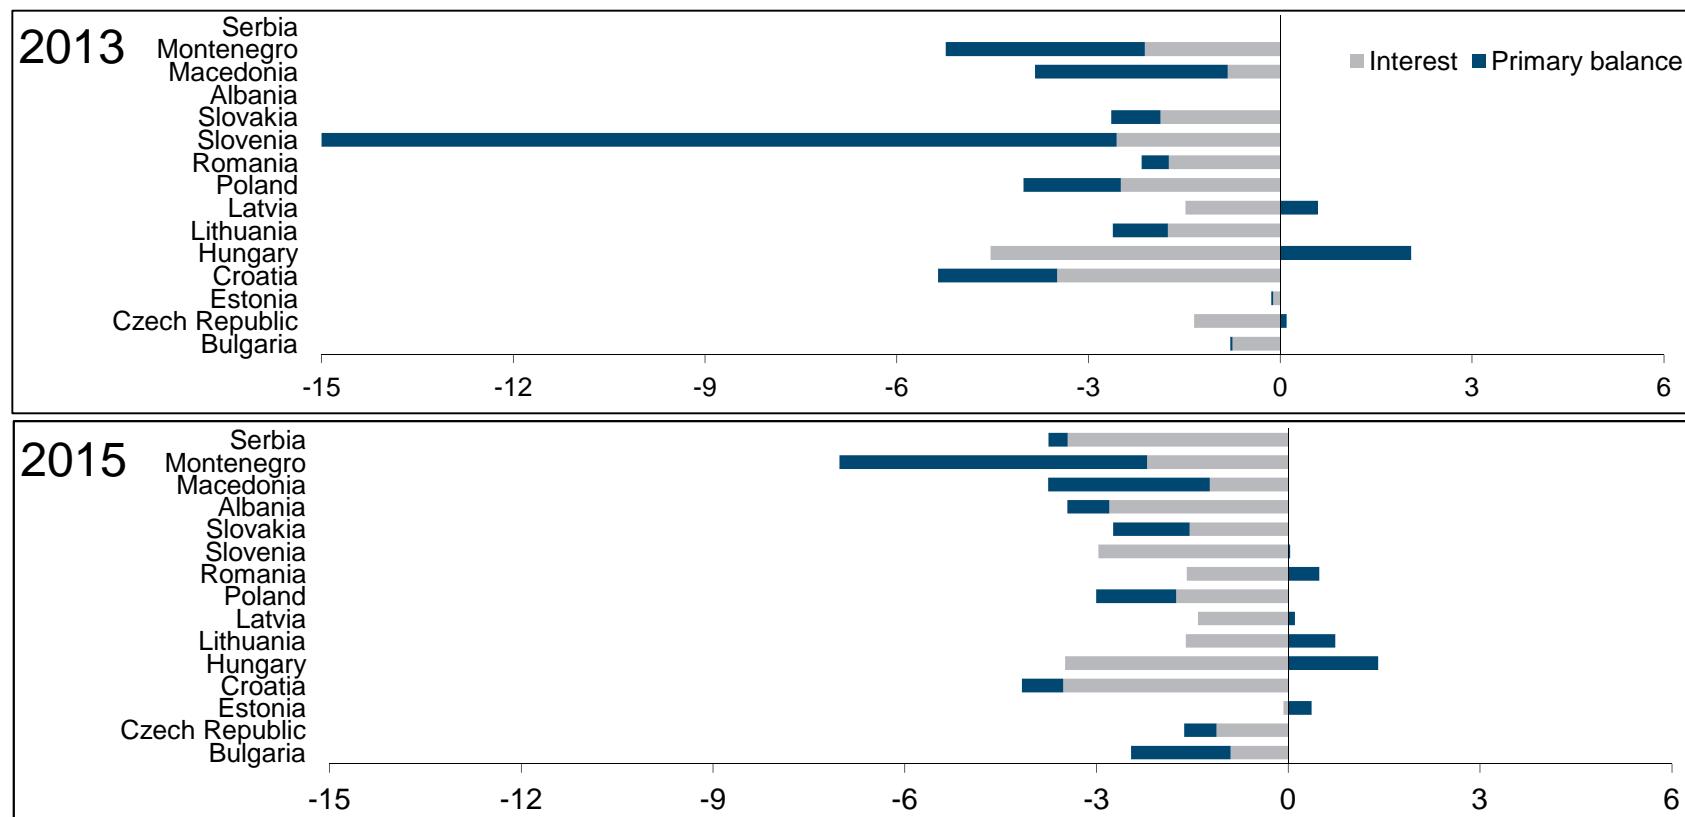

Fiscal stance of the CESEE countries, 2015

Note: Axes denote the limits included in the EU Excessive Deficit Procedure: for debt 60% of GDP, for deficits 3% of GDP.
 Source: wiiw Annual Database incorporating national and Eurostat statistics.

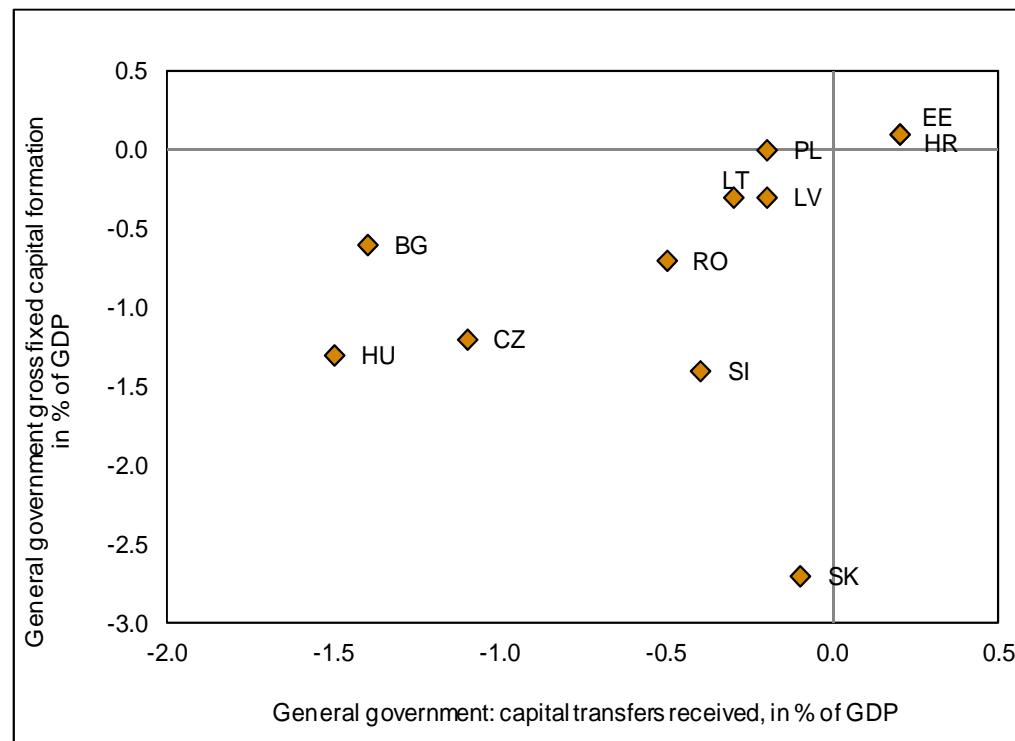

... but not all make use of it

General government net lending (+) or net borrowing (-), in % of GDP, 2013 and 2015

Public investments temporarily curtailed due to decline in EU transfers in 2016; recovery expected

General government investments and capital transfers received in % of GDP, change 2016/2015

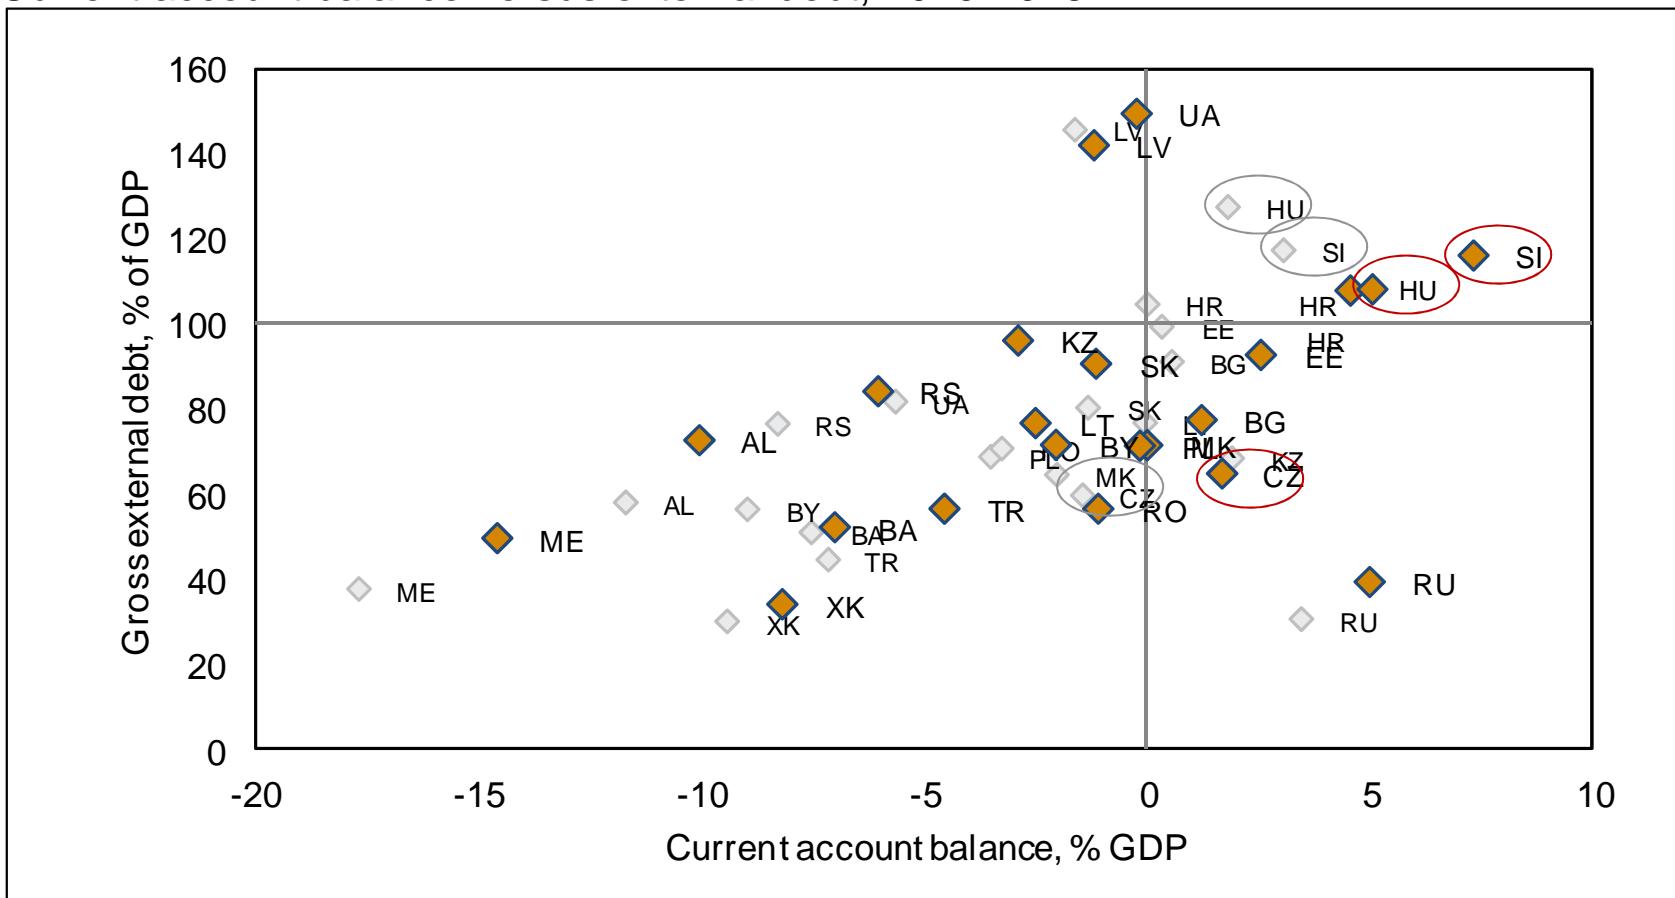

Average net financial position of the EU-CEE-10 in 2007-2014 and wiiw forecast, in % of GDP

Period	per cent of GDP
2007-2008	1.3
2009-2011	2.5
2012-2014	3.2
2015 estimated	up to 6
2016-2017 forecast	1.0 – 2.5
EFSI loans forecast 2016-2017	0.5 – 1.5

Current account deficit shrank / surplus increased in high-debt EU-CEE;
 deficits shrank but debt increased in WB

Current account balance versus external debt, 2010-2015

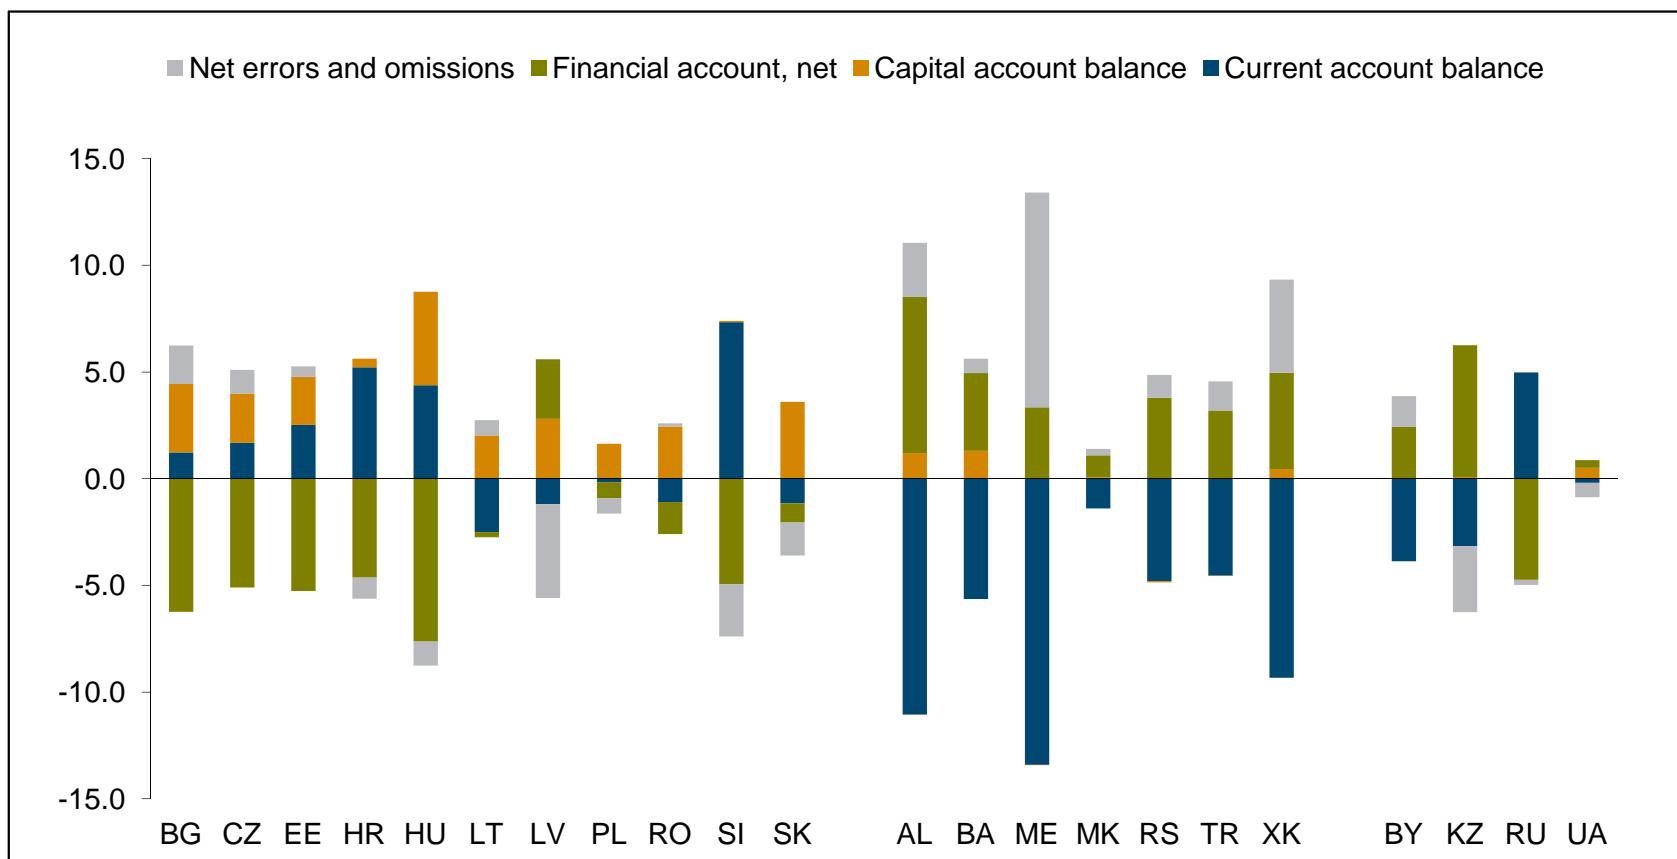

Note: Orange dots: 2015. Grey dots: average 2010-2014.

Source: wiiw Annual Database incorporating national and Eurostat statistics.

Mainly positive current and capital accounts in EU-CEE; negative current accounts in WB

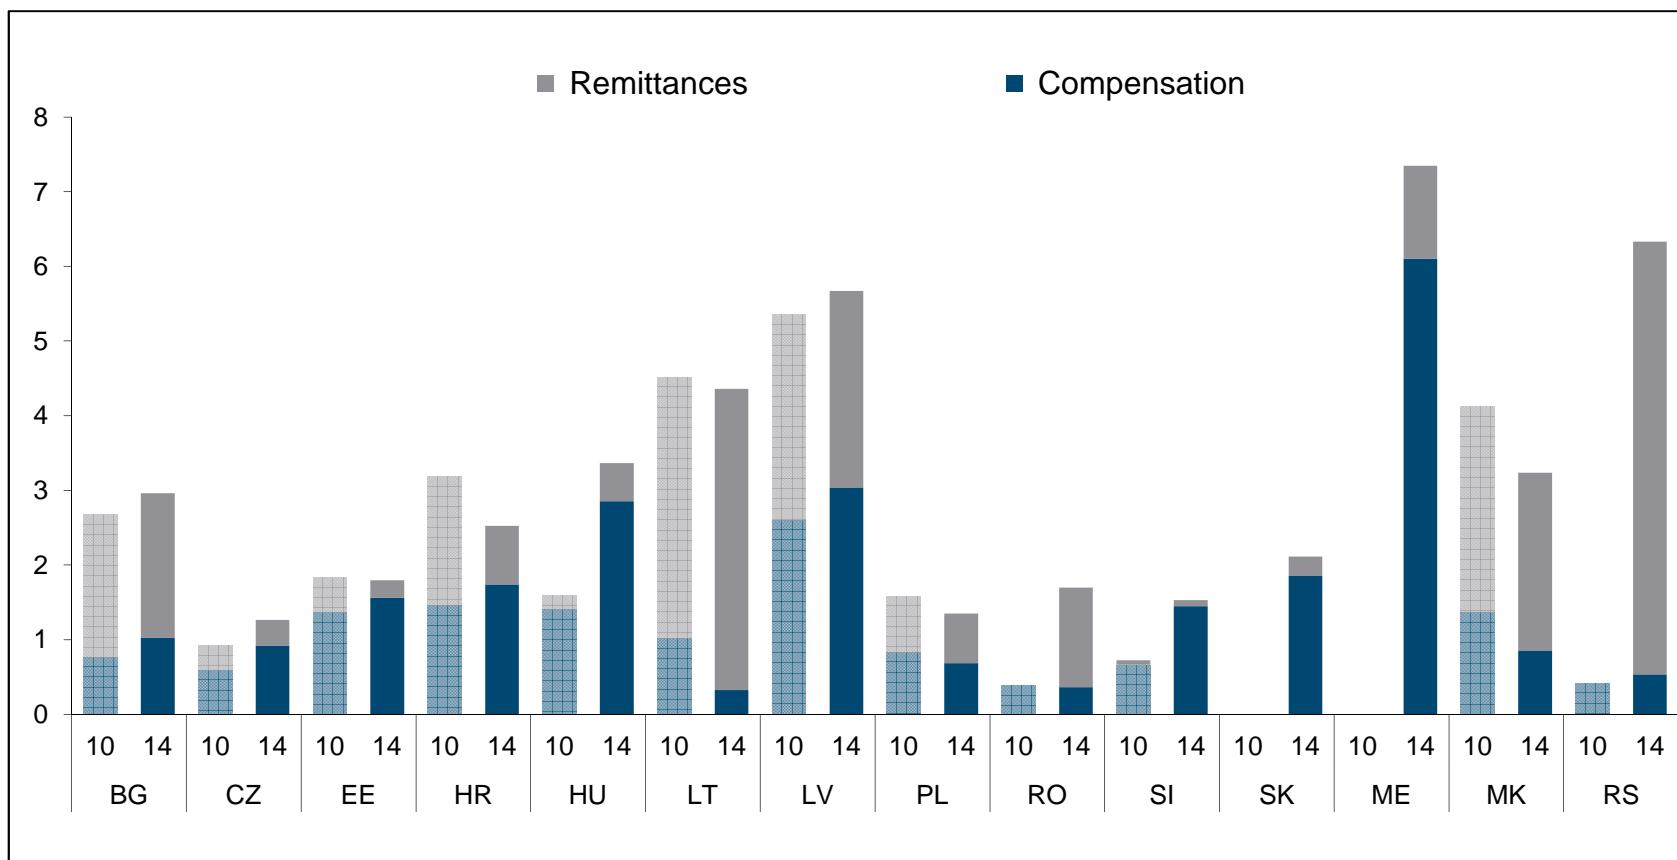

BOP components in % of GDP, 2015

Source: wiiw Annual Database incorporating national and Eurostat statistics.

Increasing private transfers in the wake of emigration

Primary income, compensation of employees, credit in % of GDP
 and secondary income, remittances, credit, in % of GDP, 2010 and 2014

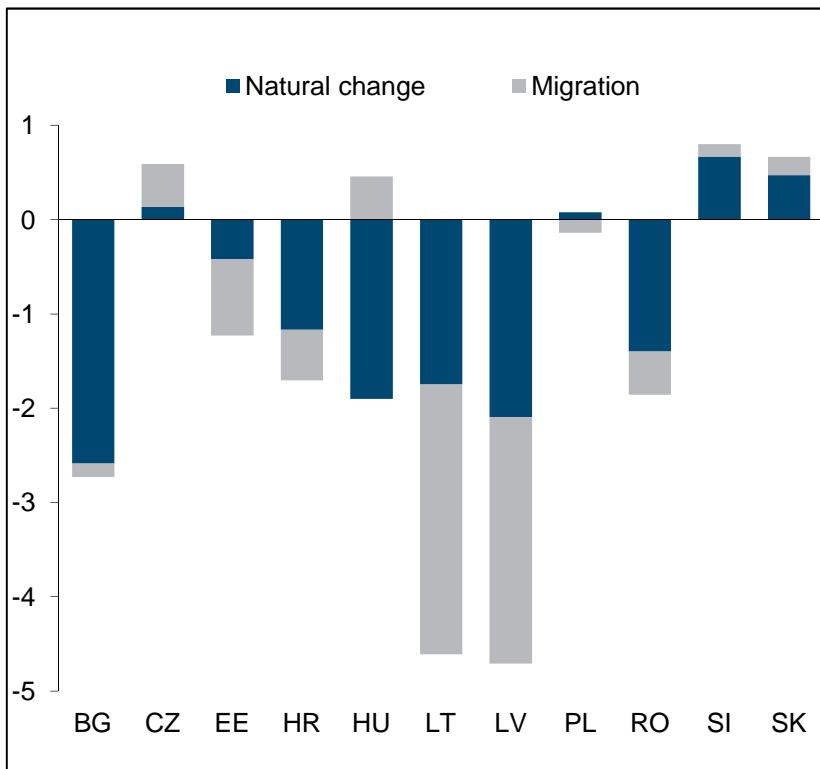

Remark: No data for 2010 compensation in SK and ME, for 2010 remittances in RO, SK, ME, RS.

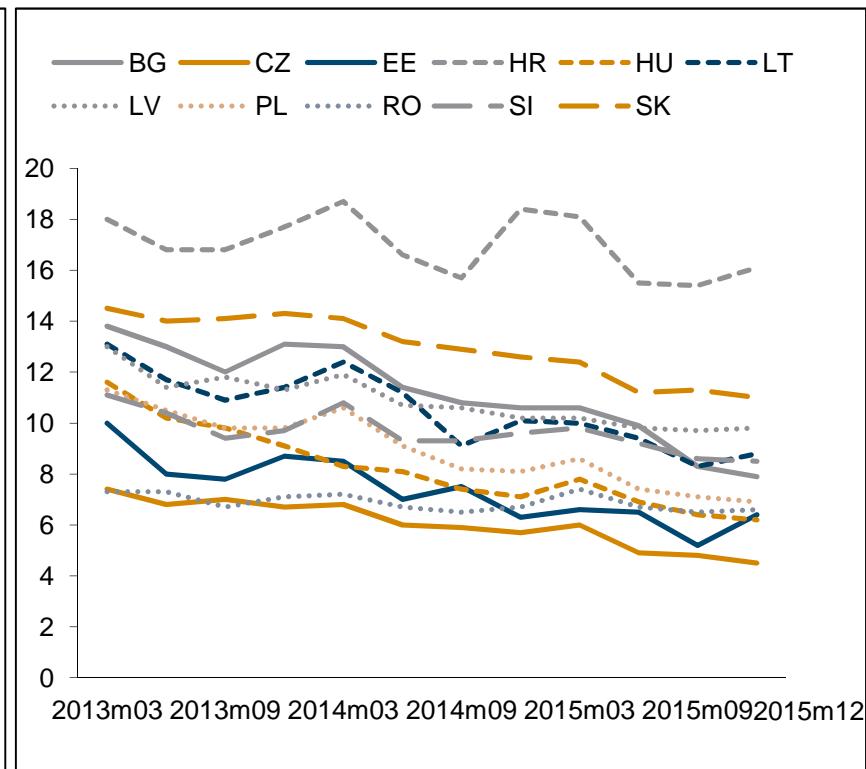

Source: Eurostat.

Demography and emigration lead to labour shortages in EU-CEE

Cumulative net migration and natural population change, 2011-2014, in % of 2010 population

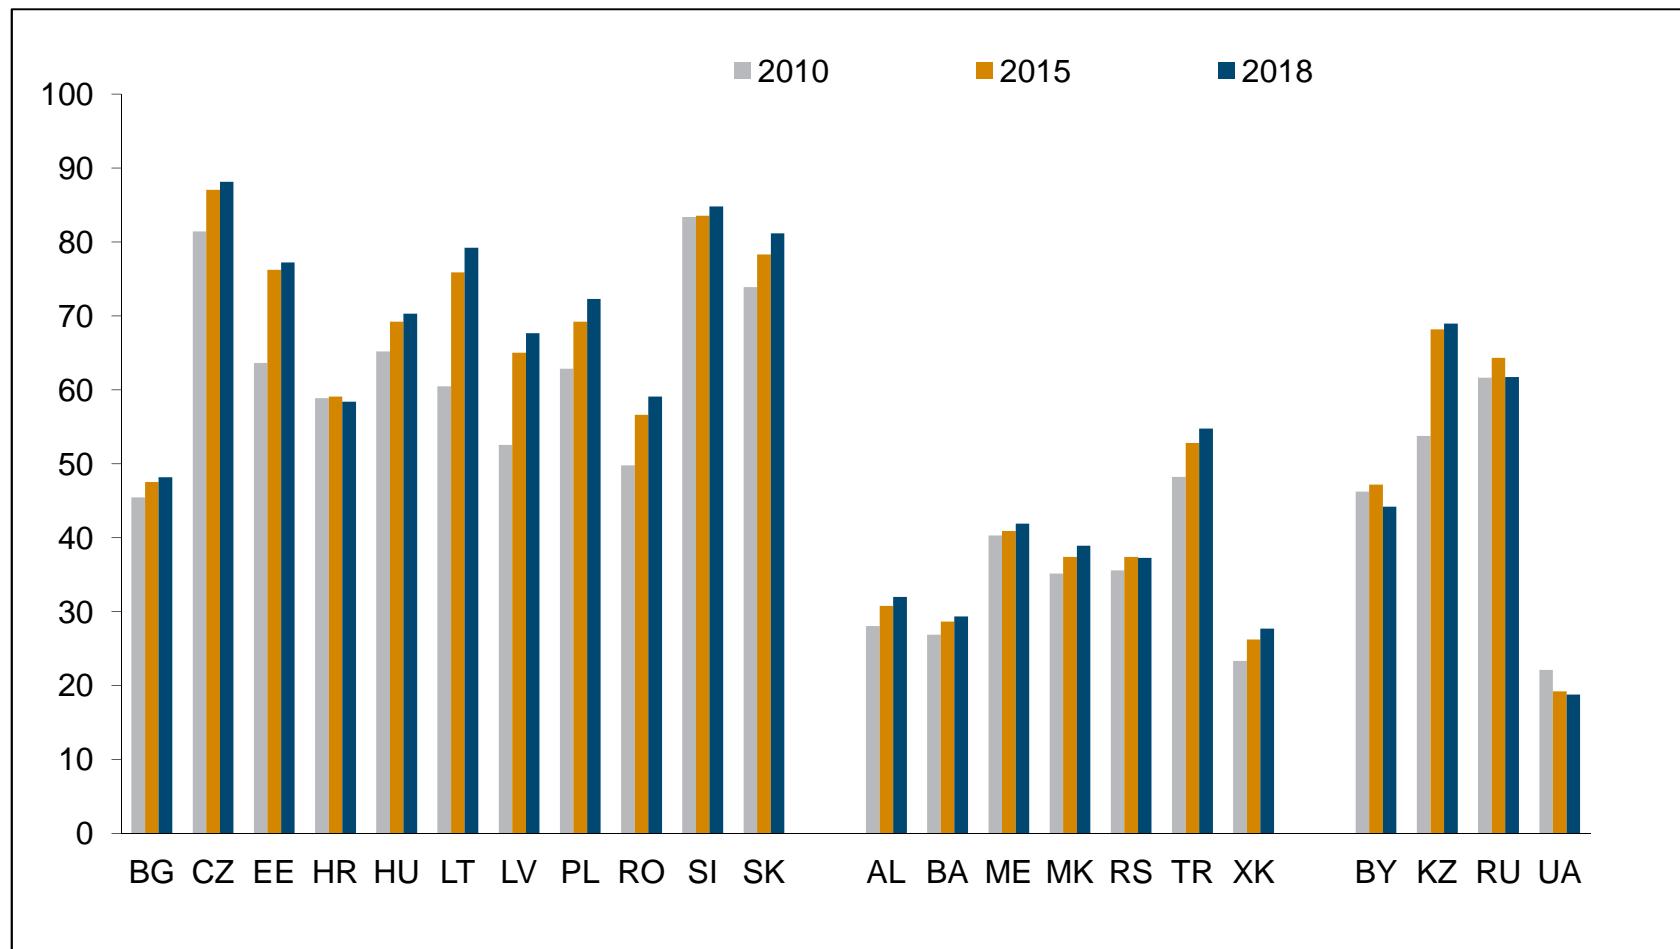

Unemployment rates decline in response to economic recovery

Source: wiiw Annual Database incorporating national and Eurostat statistics.

Catching up at 1-2 pp p.a. except HR, RS, BY, RU, UA

GDP per capita, at PPS, EU-28 average = 100

Source: wiiw Annual Database incorporating national and Eurostat statistics.

Main messages

- GDP growth in 2015 was either peak or trough
- 2016-2018 GDP in EU-CEE, Western Balkans and Turkey +3% p.a.
- In CIS+UA anaemic growth returns in 2017
 - dependent on oil price and structural reforms
- Household consumption the main growth driver but investments will recover
- Conditions of private investments improve in EU-CEE
- Temporary decline in EU transfers in 2016; Juncker Plan no substitute
- Demography and emigration lead to labour shortages in EU-CEE
- More risks ahead if global economic growth falters; China, EU stumble; commodity prices fluctuate
