Impact Quantification of Global Changes - Global-IQ

European Commission, 7th Framework Programme

August 2011 - July 2014

The objective of the project is to assess the impacts and associated costs of global change at the world scale with particular emphasis upon Europe. The sectors which will be looked at are the transportation systems, water and natural resources use (agriculture, forests), health impacts, the energy sector and population dynamics. The consequences for competitiveness and international trade issues will be analysed. The aim is also to advance economics of globalization and economics of climate change. wiiw contributes to three work packages in this project: WP3 'Models to estimate socio-economic impacts of global changes', WP4 'Scenarios of socio-economic impacts of global changes' and WP5 'Autonomous and planned adaption: total impacts of global change'.
